

THE GUM DIGESTION MACHINE

Welcome to the Chewing Gum Digestor! We present to you a spectacular bubble performance to the most gorgeous backdrop nature has to offer – the glittering ocean. All in return for just a chewed bit of gum.

Take your loved one by the hand. Sit back and watch your waste peacefully sail away into the horizon.

Soon emerging at a shore close to you!

100 000 tonnes of chewing gum are produced every year. These little bits of non-degradable flavoured plastic cannot be digested by our bodies, nor by nature. Sticking to the habit of spitting it out where we please, we create a steady flow of plastic polymers to the ocean.
