

# 1 MODULE, 3 SCALES

Dzunguni village, Eco Moyo, Kenya

The intention of the project is to achieve a flexible, open and dynamic proposal, capable of encouraging school children to improve their motor and social skills, their creativity, language and awareness of sustainability, through spaces of play, teaching and meeting. To achieve these objectives, a module has been proposed with the possibility of adapting to different scales and functions, thus offering complete freedom for the configuration of the desired environment and achieving the integration of the intervention from a sustainable design using local materials.
